Town of Round Lake, Sawyer County, Wisconsin

Soil Associations

Monico-Goodwit-Champion

The Monico series consists of deep, somewhat poorly drained soils formed in silty or loamy deposits, or both, and in the underlying sandy loam or loamy sand till.
The Goodwit series consists of very deep, moderately well drained soils formed in loess and in the underlying till.
The Champion series consists of very deep, well drained and moderately well drained soils formed in modified loamy eolian material and in the underling gravelly sandy or loamy glacial till on ground moraines and end moraines.

Pence-Champion

The Pence series consists of very deep somewhat excessively drained soils which are shallow to stratified sandy outwash. They formed in a thin mantle of loamy alluvium or eolian deposits and in the underlying stratified sand or stratified sandy outwash on glacial lake plains, outwash terraces, outwash plains, eskers, and kames within moraines.
The Champion series consists of very deep, well drained and moderately well drained soils formed in modified loamy eolian material and in the underling gravelly sandy or loamy glacial till on ground moraines and end moraines.

Pence-Padus

The Pence series consists of very deep somewhat excessively drained soils which are shallow to stratified sandy outwash. They formed in a thin mantle of loamy alluvium or eolian deposits and in the underlying stratified sand or stratified sandy outwash on glacial lake plains, outwash terraces, outwash plains, eskers, and kames within moraines.
The Padus series consists of very deep well drained soils which are moderately deep to stratified sandy outwash. These soils formed mostly in loamy alluvium and are underlain by stratified sandy outwash on glacial lake plains, outwash plains, stream terraces, eskers, kames, and moraines.
